

PCA plot showing the first two principal components (PC1 and PC2) of the data. The x-axis is labeled "PC1: 57.31% variance" and the y-axis is labeled "PC2: 22.25% variance". The plot displays two main clusters of points, each enclosed by an ellipse. The cluster on the left (black points) is labeled "17" and is enclosed in a grey ellipse. The cluster on the right (red points) is labeled "11" and is enclosed in a red ellipse. The red ellipse is significantly larger than the grey one. The black points are tightly clustered, while the red points are more spread out.
